PKHosting Web Hosting, Pakistan

Website Launch Checklist

For Pakistani small businesses: every step from domain to launch day, on one printable list.

Print this checklist and tick each box as you finish it. A site that passes every box is ready for customers.

1. Before you build

- [ ] Domain name picked: short, easy to spell and say on the phone, .com or .pk
- [ ] Hosting plan picked to match your site size (shared hosting suits most small business sites)
- [ ] One business email on your own domain (for example hello@yourbusiness.com)
- [ ] One clear goal for the site: calls, WhatsApp messages, visits, or orders
- [ ] Your business name, address, and phone number written out exactly as customers know them
- [ ] Budget and renewal dates noted, so the domain and hosting never lapse

2. Content ready

- [ ] Homepage message in one sentence: what you sell and who it is for
- [ ] Services or products listed with prices in PKR
- [ ] Real photos of your shop, work, or products (not stock photos of someone else's business)
- [ ] Contact page: address, phone, WhatsApp number, and opening hours
- [ ] About page: who you are and why local customers trust you
- [ ] One way for visitors to reach you fast: a call button or WhatsApp button
- [ ] Google Business Profile claimed, with the same name, address, and phone as your site

3. Build checks

- [ ] Site looks right on a mobile phone, not only on a computer
- [ ] Pages load fast: photos compressed before upload
- [ ] Every link and button clicked and working, no dead ends
- [ ] Contact form tested: you received the test message yourself
- [ ] Text readable: Urdu or English, as your customers actually read
- [ ] Prices, phone numbers, and addresses match your shop boards and Facebook page
- [ ] Basic pages in place: a privacy note and terms, even a short version

4. Launch day

- [ ] SSL padlock showing: the site opens with https, not http
- [ ] Domain connected and the site opens on your domain name
- [ ] Business email sending and receiving tested
- [ ] Backup switched on, and you know how to restore it

	Google Analytics and Google Search Console connected
	Sitemap submitted to Google Search Console
	Site shared with 5 customers for a final read-through

5. After launch

	Backup checked every week, updates applied
	New photos, offers, or news added at least once a month
	Every inquiry answered the same day, fastest on WhatsApp
	Visits and calls tracked monthly: what brought customers in
	Site shared on your Facebook, Instagram, and WhatsApp status
	Domain and hosting renewal dates checked every month
